

MPO/MTP Fiber Adapter

Description

The fiber optic adapter is the component connected between fiber optic connectors, which can maximize the coupling of the light energy output from the transmitting optical fiber to the receiving optical fiber. It's mainly used for the connection between cables or cable to device; The MPO/MTP connectors are precisely connected through the 0.7mm guide holes(female) and guide pins(male). TAKFLY provides two kinds of MPO/MTP fiber adapters, key-up to key-up and key-up to key-down. Our products have advantages of convenient installation, low insertion loss, good interchangeability, high and low temperature resistance, etc. It is widely used in communication system base stations, optical fiber distribution frames (ODF), optical communication equipment, etc.

Features

- High Repeatability
- High stability
- RoHS compliant

Application

- Telecom network
- CATV
- Ethernet network
- Optical communication equipment
